

The FuelForce PADLOCK fuel controller was designed to prevent fuel theft and allow fueling access for Fleet Owners with up to **50 Vehicles**, that have no fuel management system in place, or have a need to replace an older fuel management system.

FuelForce PADLOCK is a simple low cost system to provide authorized fueling and prevent misuse from unattended fuel pumps.

PADLOCK Controls up to 4 hoses & eliminates attended fueling and misuse by using Proximity fleet keys for vehicle identification at the lowest price.

No FuelForce software is required since this system comes with advanced **FuelServe.net** web based hosting service from Multiforce. Use an analog phone line or cellular modem for communication to the hosting service.

Present the Vehicle Key Fob, enter the Odometer, select the Hose #, and Start Fueling!

**Protect Your Expensive Fuel!
Upgrade Your Fuel Site With
A Low Cost
PADLOCK System !**

Advantages of the PADLOCK System:

- Eliminates Fuel Loss At Your Fueling Site!
- No Traditional On-Site FuelForce Software Required.
- Controller Uses a Phone Line or Wireless Data Modem.
- Tracks Vehicle Usage and Odometer or Hours.
- Access Your Reports And Vehicle Data Using The Internet.
- Up To 50 Proximity Vehicle Key Fob's With Each System.
- Lowest Priced Commercial Fuel Management System Package.

PADLOCK Package Includes:

- Fuel Controller - Factory Loaded With Data for 50 Vehicle Accounts
- Up to 50 Vehicle Key Fob's Supplied with System
- PADLOCK Uses Analog Phone Line Or Wireless Data Modem
- Customer Training Included
- **FuelServe.Net** Hosting Service

Fuel Management For Smaller Fleets. Used with Above Ground and Below Ground Tank Fueling Systems.

FuelServe.Net[®]

Fuel Management By Multiforce

Once you have a FuelForce fuel controller authorizing fuel, you want a convenient, simple and cost effective tool to view important information, access the fuel data and perform administrative activities such as vehicle or fuel pricing updates. You no longer are limited to the traditional software licensing approach, and with the web based hosting service, FuelServe.Net, you can now use any web browser to accomplish your fuel management needs more efficiently, at a lower cost, and from any device that has access to the internet.

This powerful, easy to use system gives the user the ability to view and download files to an internet accessible laptop, iPhone, PC, or handheld device. With a spreadsheet program (such as Excel), you can use your customized Excel .csv file as downloaded or modify it to meet your needs. Or import the file into the reporting or fleet management program of your choice, then run your existing management reports. FuelServe.Net is the engine that lets you view, sort, and filter your data to give you only the selected information you need to build the report you want to present.

On-site FuelForce software is not required. Manage your data from anywhere you have internet access.

The FuelServe.Net service connects into each FuelForce fuel controller using either an analog phone line or wireless cellular data modem, and imports your fuel data into your account. Now you have the ability to securely access any of your data through your unique password protected FuelServe.Net website.

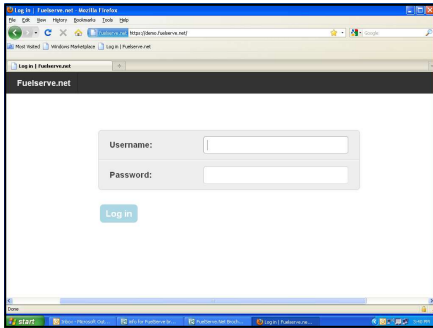

Use Excel, Access, Crystal Reports or other report writer, or import the data into your Enterprise System. Features include the ability to add, modify or make inactive any vehicles in your account. All activities can be performed from your office location, or just as easily from any remote location that has connection to the internet.

FuelServe.Net Advantages:

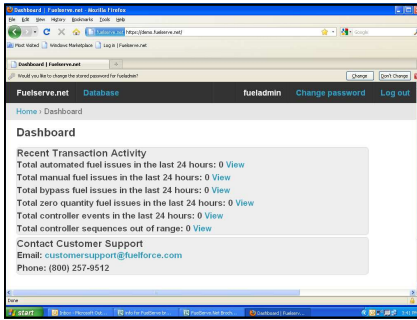

- Access Your Account From Anywhere You Have The Internet. You Do Not Need To Be On Site.
- Simple To Use As "On-Line" Banking.
- No FuelForce Software On Your PC's.
- Free Up Resources By Having FuelForce Provide Your Fuel Data To You.
- Great For Customers With Single or Multiple Sites.
- Add Tank Gauge Data For Reconciliation.
- Fuel Managers Access Fuel Data Via Secure Website.
- Use Spreadsheets Or Report Writer For Customized Reports.
- Provides System Health Checks.
- Includes Automatic Backup Of Your Data.
- Daily Polling.

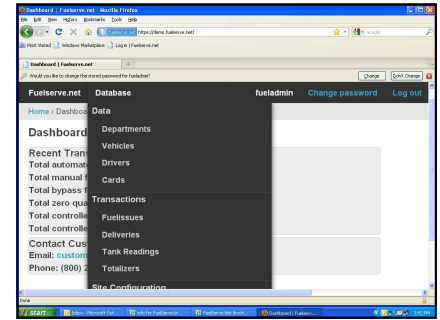

**Access Your Data Using The Internet.
Customize and Print Your Own Reports!**

Downloaded Information Can Be Customized To Meet Your Needs

Benefits of FuelServe.Net over maintaining traditional Fuel Management System software on your network are:

- Eliminates the cost of system administration by your IT department.
- Fuel Managers can access your fuel data through secure access (https) via a web browser from any place at any time.
- Health check of your sites for the most recent period (approximately the last 24 hours):
 - Number of fuel transactions
 - Number of bypass transactions (locate the problems and when they occurred)
 - Number of zero quantity transactions (spot bad pulsers and other site related problems)
 - Number of error events
- Authorized users can query and filter fuel issues, deliveries, dip readings, and various databases on line with little or no training. When you have selected the data you want to look at in more detail, you may download it to your local computer in a .csv format for saving to Excel, Access, or other program of your choice.
- Once you have created a view of the data you like, you can "bookmark" it for future access without resetting your query and filters. For example, if you want a monthly report sorted by vehicle, you can set up a query filtered from "Last Month" to "This Month" and all transactions that occurred last month will appear automatically in your query ready for download and reporting.
- You have a built in Tank Reconciliation report that can be populated by manual dip readings and deliveries.
- You can pass your downloaded file to other systems in your in-house network without having to know anything about the FuelForce host software. While you may be familiar with the FuelForce host software today, every time you have a personnel change, you need to retrain the new person on how to administer the system. Many times, this retraining loses something in the translation.
- Upgrading FuelServe.Net is done by Multiforce, not your IT department. This keeps it system independent. You are no longer concerned if the software will run on your new operating system. Simply download your file into whatever version of Excel or other product you wish.
- Most users today have experience with some spreadsheet or report writer. FuelServe.Net allows you to take advantage of this experience when viewing your fuel data.
