

The PADLOCK Plus fuel controller was designed to prevent fuel misuse for Fleet Owners with **up to 50 Vehicles**, that have no fuel management system in place, or have a need to replace an older fuel management system.

FuelForce PADLOCK is a simple low cost system to provide authorized fueling and prevent misuse from unattended fuel pumps.

Controls up to 4 hoses & eliminates attended fueling and misuse by using magnetic stripe fleet cards for vehicle identification at the lowest price.

No FuelForce software is required since this system comes with advanced FuelServe.net hosting service from Multiforce. Use an analog phone line or cellular modem for communication to the hosting service.

Insert the card, enter the odometer reading, select the Hose #, and start fueling!

Protect Your Expensive Fuel! Upgrade Your Fuel Site With A Low Cost PADLOCK Plus!

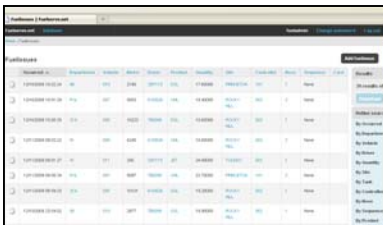

Advantages of the PADLOCK Plus:

- Eliminates Fuel "Misuse" 24 Hours A Day!

How Does the PADLOCK Plus Differ From A Full Featured FF894 Fuel Controller?

PADLOCK Plus

50 Vehicle Cards Come With Each System OR Use Without Cards

PADLOCK PLUS FF894 SYSTEM:

- **Lowest Cost System**
- Proven FF894 Hardware.
- Up To 50 Vehicle (Maximum) System
- FuelServe.Net Hosting Included 1st Year
- No Software Needed
- Controls 1 to 4 Hoses
- Uses Analog Phone Line OR Wireless Data Modem (Optional) for Hosting Service
- 50 Card System or use the System without Cards
- Access Fueling Reports From Wherever You Have Internet Access! (Office, Home, Airport etc.)
- **UPGRADEABLE** to Full Featured System at anytime
- Customer Training Included

Full Featured FF894 SYSTEM:

- 10,000 Vehicle System
- 10,000 Driver System
- Full FuelServe.Net Hosting OR Software On Site
- No FuelForce Software Needed With FuelServe Hosting
- Controls 1 to 4 Hoses
- Use Analog Phone Line or Data Modem for Hosting Service
- Cards Or Optional Key System
- Optional Tank Gauge Reconciliation

The FuelForce PADLOCK System is also offered in a PREMIER version.

The PADLOCK Premier version has all of the functionality of the PADLOCK Plus package, plus additional features:

If you have a need for tracking more than 50 Vehicles or tracking Drivers, this system is for you.

You can use any number of cards (for either vehicles or drivers), or use the system without cards. Your drivers can swipe their card, and enter a Driver # or Vehicle #.

Odometer reasonableness is checked to verify a proper odometer reading is entered.

Also, with the PADLOCK Premier package, you can have two people log into the web based FuelServe.Net account for administration (to adjust Vehicle/ Driver/ Pricing etc. and for downloading any information).

With the PADLOCK Premier Package - Smaller Fleet Owners now have an enhanced, low cost Fuel Management System

FuelServe.Net®

Fuel Management By Multiforce

Once you have one or more FuelForce fuel controllers authorizing fuel, you want a convenient, simple and cost effective tool to view important information, access the fuel data and perform administrative activities such as driver, vehicle or fuel pricing updates. You no longer are limited to the traditional software licensing approach, and with the web based hosting service, FuelServe.Net, you can now use any web browser to accomplish your fuel management needs more efficiently, at a lower cost, and from any device that has access to the internet.

This powerful, easy to use system gives the user the ability to view and download files to an internet accessible laptop, iPhone, PC, or handheld device. With a spreadsheet program (such as Excel) you can use your customized .csv file as downloaded or modify it to your needs. Your data can be imported into any reporting or fleet management program of your choice - then run your existing management reports with your data. FuelServe.Net is the engine that lets you view, sort, and filter your data to give you only the selected information you need to build the report you want to present.

The FuelServe.Net service connects into each FuelForce fuel controller using either an analog phone line or wireless cellular data modem, and imports your fuel data into your account. Now you have the ability to securely access any of your data through your unique password protected FuelServe.Net website.

Use Excel, Access, Crystal Reports or other report writer, or import the data into your Enterprise System. Features include the ability to add, modify or make inactive any drivers or vehicles in your account. All activities can be performed from your office location, or just as easily from any remote location that has a connection to the internet.

FuelServe.Net Advantages:

- Access Your Account From Anywhere You Have The Internet. You Do Not Need To Be On Site.
- As Simple To Use As "On-Line" Banking.
- No FuelForce Software On Your Computer.
- Free Up Resources By Having FuelForce Provide Your Fuel Data To You.
- Great For Customers With Single Or Multiple Sites.
- Interface To Your Tank Gauge System.
- Fuel Managers Access Fuel Data Via Secure Website.
- Different Levels Of Access: Admin or Read Only.
- Use Spreadsheets Or Report Writer For Customized Reports.
- Provides System Health Checks And Sends Email Alerts To Technicians If There Is A Problem.
- Includes Automatic Backup Of Your Data.

Benefits of FuelServe.Net over maintaining traditional Fuel Management System software on your network:

- Eliminates the cost of system administration by your IT department.
- Fuel Managers can access your fuel data through secure access (https) via a web browser from any place at any time.
- Health check of your sites for the most recent period (approximately the last 24 hours):
 - Number of fuel transactions
 - Number of bypass transactions (locate the problems and when they occurred)
 - Number of zero quantity transactions (spot bad pulsers and other site related problems)
 - Number of error events
- Authorized users can query and filter fuel issues, deliveries, dip readings, and various databases on line with little or no training. When you have selected the data you want to look at in more detail, you may download it to your local computer in a .csv format for saving to Excel, Access, or other program of your choice.
- Once you have created a view of the data you like, you can "bookmark" it for future access without resetting your query and filters. For example, if you want a monthly report sorted by vehicle, you can set up a query (report view). With a saved bookmarked view, which you might label "Last Month Vehicle Report" all transactions that occurred last month will appear automatically in your query ready for download and reporting.
- You have a built in Tank Reconciliation report that can be populated by automated or manual dip readings and deliveries.
- You can assign administrative rights to persons responsible for maintaining your vehicle and driver database on-line and user rights to persons who can only view and download their data. You can also restrict users to viewing only those departments and sites they are responsible for.
- For Clients upgrading to FuelServe from traditional software, you can pass your downloaded file to other systems in your in-house network simply and easily. While you may be familiar with the FuelForce host software today, every time you have a personnel change, you need to retrain the new person on how to administer the system. Many times, this retraining loses something in the translation. Now with FuelServe.net, these are no longer concerns.
- Upgrading FuelServe.Net is done by Multiforce, not your IT department. This keeps your Fuel Management system independent. You are no longer concerned if the software will run on your new operating system. Simply download your file into whatever version of Excel or other product you wish.
- Most users today have experience with some spreadsheet or report writer. FuelServe.Net allows you to take advantage of this experience when viewing your fuel data.
- Select the FuelServe.Net package that meets your needs...
All packages are covered by an annual subscription fee, which includes automatic backup of your data and varies with the number of sites managed, the number of times the sites are polled per day, your choice of Help Desk support level, and optional access to new FuelServe.Net features offered as future enhancements.
