

FuelStream™ Your Integrated Retail and Bulk Fuel Solution

Multiforce Systems Corporation has partnered with Voyager Fleet Systems to provide a powerful yet simple interface linking bulk fuel site transactions to the Voyager Fleet Card billing and data management systems. The Voyager card is recognized by most retail fueling sites around the United States.

Some fleet owners provide cross agency fueling services. They have to bill transactions against "customer" vehicles to recover costs. While this seems easy enough to do using FuelForce billing reports, there are internal costs for your time and resource to capture the data, distribute it to the proper account, and create the bills and collect the funds. It also requires the "customer" to validate the bills prior to payment and to merge the fuel data with that collected from retail sites.

The Voyager/Multiforce solution takes all the headaches out of the billing process and greatly reduces the cost. The key to this process is that the fleet owner can become a "Merchant" of the Voyager card. In a matter of a few minutes, the fleet owner could issue fuel to a variety of Voyager fleet card holders including the US Postal Service, the General Service Administration, and many State and local government agencies.

Multiforce will work with the "Merchant" fleet owner to set up "customer" accounts. These accounts will receive one monthly bill for all Voyager transactions. The Merchant will be paid promptly, usually within one week of submission of data. All this is available for one low transaction fee.
